Research

We are planning to update our database along with the updates in our webform this week so my research was based around it.

Lessons Learned & Best Practices

Best practices is doing pair programming and doing testing in each steps.

Assignment Progress

This week we had discussion on the upcoming TPR. We also did weekly minutes together. And I also did the journal.

Prototype Activities

We are almost done with the webform and moving towards the new database updates possibly this upcoming week.

Result & Conclusions

This week we completed our webform and we are starting database from next week.

What is the problem?

We had a problem with the search button when the user clicks the search button there was no zoom on the webpage. This issue was on opera, edge, and firefox.

Why is that a problem?

This is a problem because we want the webpage to look similar across all browsers.

How are you solving it?

Using different version of “onfocusout” implementation that uses “eventHandler” for Javascript. It is working for now, but we will do more testing in the future.
