Research

The research this week was for the update of the new database. Since my part

was to prepare database schema for updates on the existing database.

Lessons Learned & Best Practices

The best practice for we have done this week is adding those extra meetings so we could prepare the review documents and also extra time for coding and error check so we can complete the form.

Assignment Progress

We had lot to do this week and had several meetings throughout the week.

Completing the Team Peer review document and also weekly minutes together. I did

the database schema file ready so we can make the tables for the database next week.
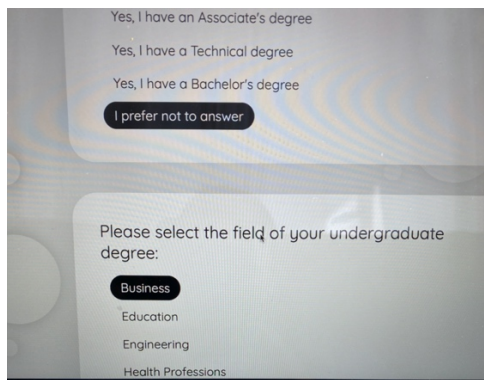

Prototype Activities

This week we worked mostly on the Javascript which is almost done. I did the

testing also and found few bugs and reported to the teams. So, hopefully this week the

form will be complete, and we can update the Database.

Conclusions

The conclusions this week will be the webform is mostly complete with the Qualtrics provided by the ISME team members.

What is the problem?

We have few bugs in the form like below image where u can see which undergraduate degree on prefer not to answer button.

Why is that a problem?

It is a problem because we are creating a form which is carefully curated by the ISME team members and approved by our project sponsor and the above is doesn't match the requirement.

How are you solving it?

We have added more coding designated days to our schedule, and we conduct many other meetings as necessary to fix the bugs. So, this way we can complete our work on time as we hoped.
